

MEDIA RELEASE

TIANQI LITHIUM HYDROXIDE PROCESSING PLANT PROJECT (TLA LHPP PROJECT)

Tuesday, 5 September 2017

Alltype Engineering delivers first tank packages to site.

Local Naval Base fabricator, Alltype Engineering, was engaged by MSP Engineering to fabricate 32 stainless steel tanks for the lithium hydroxide project in Kwinana.

The first and largest tanks were completed and successfully delivered to site this week.

The design of the tanks was based on complete off-site fabrication to comply with allowable transport corridors between Naval Base and the site.

The lithium hydroxide plant is being constructed in response to the growing demand for lithium hydroxide as a key material in the manufacture of lithium ion batteries used in the electric vehicle (EV), battery storage and consumer electronics market.

Once complete, the facility will be the world's largest lithium hydroxide conversion plant and will produce the highest purity battery grade lithium hydroxide available in the market place.

The facility remains on target to be completed in the fourth quarter of 2018.
